Pam –

We have reviewed your November 9, 2018 letter regarding potential additional investigations at the Lower Ley Creek site in Syracuse, NY, and offer the following responses:

1. The Respondents will include additional sampling, as requested, in Soil-F (3) and the western portion of Soil C (6) as illustrated on the attached figures. Each of these samples will be collected to four feet, with the top two feet analyzed and the bottom two feet held for analysis.
2. The Respondents' review of the narrow corridor between the Ley Creek channel and the CSX railway ballast has confirmed that there are property boundary and access issues that cannot be addressed prior to the completion of the field work starting next week. Additionally, the Respondents have not received from EPA or NYSDEC the data generated at Upper Ley Creek which forms the basis of this sampling request. This issue will require more time and assessment to resolve after completion of the impending field work. The Respondents would appreciate your assistance in making available the data collected at Upper Ley Creek

The Respondents are scheduled to have field locations flagged and utility clearances received by the end of the week of December 3. Sampling, surveying, etc. will immediately follow.

Please let me know if you have any questions.

Todd

Todd,

We had just a couple of comments on your response. Let me know if you want to discuss further. Also please send me your sampling schedule.

Thanks, Pam
